PROFESSIONAL PROACTIVE PREVENTION

Providing comprehensive digital security guidance.

ABOUT LUMINANT

Luminant was founded by IT experts with deep technical backgrounds who understand business who realized security was lacking or nonexistent for many businesses or within internal IT departments. Our people have worked in IT and understand its mission and operations. And we've worked at providing service to all kinds of clients; exposing us to many different industries, all kinds of technology, and many different environments. As a result, we understand that IT and security must serve the business. It is a critical necessity that IT and security processes be aligned properly and both must be inter-twined in order to maximize effectiveness and transparency. Not only do we understand how security can affect IT and the business, but also focus on customer service and how IT and security can impact the users who are just trying to get a job done.

PROVIDING EXPERTISE IN...

✔ Analyzing security risk through vulnerability assessments, penetration testing, and social engineering.

✔ Compliance validation for HIPAA, PCI, PII, ITAR regulations as well as industry and vendor best practices.

✔ Threat management including executing risk prevention plans, augmenting existing IT resources, and consultative advisory with external vendors

✔ Ongoing security maintenance, recurring audits, and security awareness training. Establish security incident response to potential breaches.

> "There needs to be a culture of security; it's not just a checkbox anymore."

OUR APPROACH

We Bring a Holistic Perspective to Information Security.

Our differentiation comes from providing a full risk analysis, which incorporates the human element through social engineering as well as the vulnerabilities exposed within system infrastructure. The information gathered is incorporated into a full report and managed with our toolset. Routine audits are also performed to ensure your business is adhering to the most current compliance regulations.

We provide unique insight into not only the technological components, but also consultative instruction on how to interpret the results of the cyber security risk assessment, supervise the implementation of a risk management plan, and understand the impact on business decisions as they pertain to securing business assets. We are there throughout each stage of the process, providing expertise, advice, and oversight on how proactive prevention can mitigate the risks that pose a threat to your company's regulatory governance, reputation, and bottom line.
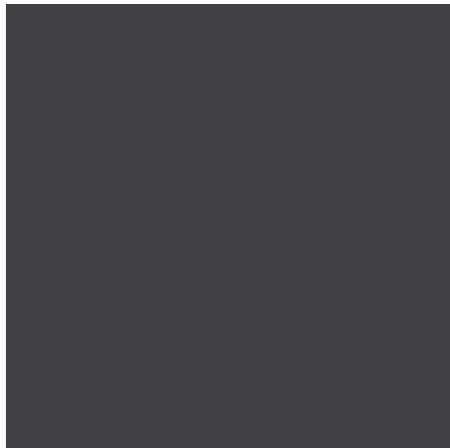

Digital Security Education

The most important and common tactic used by cyber criminals is to target individuals within an organization.

Educational awareness is critical to combating the psychological tactics attackers capitalize on to penetrate and obtain access to company data. Training efforts should focus on providing employees with the most current information and tools to recognize these specific characteristics.

Technology Infrastructure

Our methodology is to assess security from various angles, providing a detailed view of the technology vulnerabilities.

We decipher the level of risk associated with each layer of the OSI model against internal and external scans. We utilize penetration testing along with internal and external analysis of technical, administrative, and physical environments to provide insight into the level of risk associated with your technology infrastructure.

Luminant Digital Security focuses solely on providing internet security solutions catered to your business needs

Our holistic multi- facetted approach that combines not only the technical aspects of digital protection including systems and infrastructure, but also the human element.
